Jakarta, Indonesia 

EDUCATION

S1 Teknik Informatika

STMIK Widuri, Jakarta

Graduate: September 2024

GPA 3.5/4.0

SKILLS

● Programming Languages

JS/TS, C# (.NET), Golang, Java

● Backend

Express, ASP .NET , Fiber, Spring

● Frontend

React, Vue, Blazor

● Containerization

Docker, Podman

● Databases

Postgres, Mysql, MongoDB

● CI/CD

Github Action, Gitlab, Jenkins

● Others

Git, Grafana, Kibana

PROFESIONAL SUMMARY

Fullstack Engineer with experience building end-to-end applications using Node.js (JS/TS), Go, Java, and C# .NET. Focused on developing modular REST APIs, clean architecture, and container-based deployment with a production-oriented approach.

EXPERIENCE

PT Sasmita Wikrama Nusantara - (Januari 2026 - April 2026)

Title : Junior Programmer & Infrastruktur Support

Tech Stack: .NET , ASP.NET ,Blazor (Mudblazor UI), Devexpress

Contributed to the development of an internal Bareskrim application with a focus on reporting and monitoring system features..

- Developed PDF reporting systems using DevExpress (.repx & UI Designer), including data mapping implementation and business logic to generate dynamic reports from databases.
- Managed data transformation processes from databases into report formats, including filtering, conditional logic, and formatting according to operational requirements.
- Developed monitoring pages for administrators using Blazor and MudBlazor.
- Integrated Grafana and Kibana dashboards into the application through embedded views (iframe), as well as configured environment-specific settings to support multi-environment deployment

JURNAL

Pasena, R.B. (2025).

Implementation of a Chatbot

Based on AI Markup Language for Administrative Service

PERSONAL PROJECTS

Contact Management System – Fullstack Application

Feature: JWT Authentication, Contact Management, Input Validation, REST

Built a contact management application with multiple frontend implementations using React, Vue, and Blazor, as well as multiple backend implementations using Go (Fiber), Node.js (Express), Bun (Hono), C# .NET (ASP.NET), and Java (Spring Boot), to evaluate differences in application architecture, concurrency approaches, and backend development patterns across various technologies.

- Designed modular REST APIs with JWT authentication, input validation, and contact CRUD features.
- Structured the backend using Clean Architecture (Handler → Service → Repository) and prepared repository adapters to simplify database/ORM replacement.
- Developed frontend applications using React and Vue with separation of logic, API calls, and UI for maintainability.
- Used Docker and Docker Compose for backend, frontend, and database environments.
